CAMBISTE

Connecting African wallets to Global Banking

From MTN wallets to global bank accounts

A proposed pilot for outbound international payments from Nigeria and Ghana

Pilot proposal | For discussion

Unlock a new international payment use case

A target customer journey, to be designed with MTN

01

Initiate

Start an international transfer through the MTN experience

02

Review

Check the quote and beneficiary details before confirming

03

Pay

Pay in local currency from the mobile money wallet

04

Track

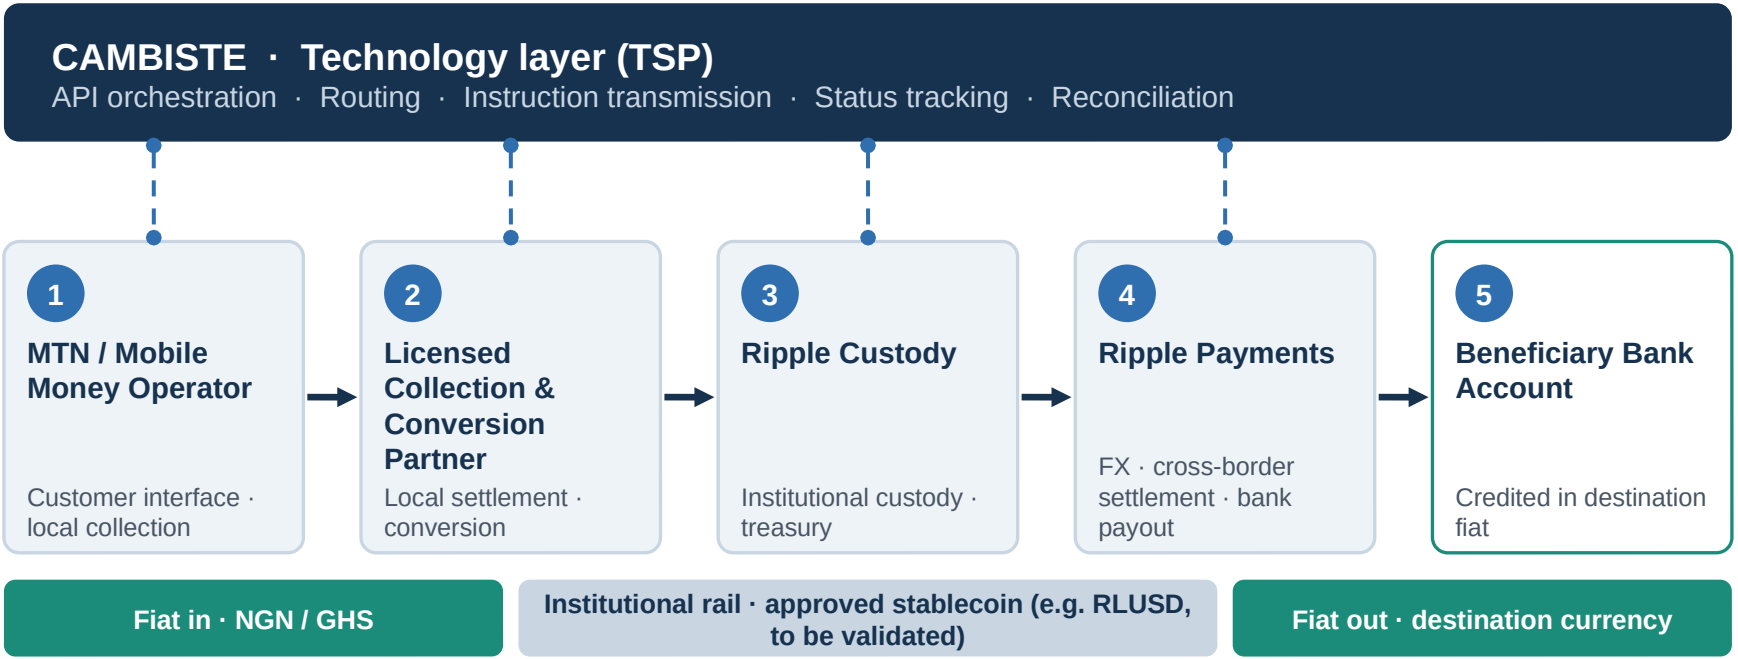

Follow delivery to the overseas bank account

Target users: individuals and SMEs, subject to eligibility

Assumption: illustrative journey. No existing MTN app feature or integration is implied.

A clear operating model

The stablecoin is a settlement rail between institutional participants only. Asset, network and entities to be validated.

Clear roles. Defined accountability.

Participant	Operational role	Responsibility boundary
MTN / local entity	Customer interface and local fiat collection	Within its own authorisations and applicable agreements. Holds no crypto-assets; offers no crypto product to customers.
Licensed collection & conversion partner	Local settlement and conversion to an approved stablecoin	Only within its authorisations for the country, activity and corridor concerned.
Ripple infrastructure & relevant entities	Institutional custody and treasury; FX, cross-border settlement and bank payout	Per the entities, licences, configuration and corridors actually available and agreed.
Cambiste	Technical orchestration: APIs, routing, status tracking, reconciliation	No collection, no custody of customer funds or stablecoins, no proprietary conversion.

Final responsibilities and regulatory requirements to be validated for each entity and corridor before launch.
KYC/AML, sanctions, monitoring, reporting and complaints allocation to be agreed between the parties. Each participant keeps its own obligations.

Commercial value for MTN

New transaction revenue opportunities

Improved payment economics

Greater wallet utility and engagement

Scalable access to international bank payouts

Transaction economics, to be agreed together

Customer service fee – **Conversion & liquidity cost** – **Payout cost** – **Participant remuneration**

No pricing, revenue share or savings figures until validated with pilot data.

24/7

Processing target

Bank credit time depends on the corridor and the receiving banking systems.

A focused pilot: Nigeria & Ghana

Readiness validation
Entities, partners, contracts

End-to-end testing
Funds, data and reconciliation flows

Controlled opening
Indicative 90 days after readiness

Review
Go / no-go on KPIs

NG

Nigeria

Separate workstream. Local entity, partner and regulatory validation.

Shared pilot scope

- Limited destination corridors, selected together
- Agreed customer cohort
- Agreed transaction limits

GH

Ghana

Separate workstream. Local entity, partner and regulatory validation.

Pilot indicators

- Success rate
- Time to credit
- All-in cost per transaction
- Contribution margin
- Reconciliation rate
- Complaints
- Compliance incidents

Align on the pilot workstreams

Decisions we propose to take together

- Name business, product, technical and compliance leads
- Confirm participating entities in Nigeria and Ghana
- Select priority corridors and use cases
- Validate local partners, contract framework and responsibilities
- Define commercial terms and launch criteria

PROPOSED NEXT STEP

Joint scoping workshop

MTN · Cambiste · Ripple

To frame the pilot, subject to the availability and agreement of all parties.
